

The original Academic PDF has been superseded

The universal convergence and “only profitable strategy” claims in the original Version 1 PDF are withdrawn. Its payoff model made the result true at every positive scarcity level and did not prove the intended hyperdeflationary threshold.

Current result

Version 1.1 preserves the scarcity-driven idea under the conditional strict margin $M(t)K(t) > B(t)$. It proves the paper utility-bound implication, the exact least integer threshold, a bounded-deviation asymptotic result, and a relative-growth result. The conclusion applies only to the declared two-action model and authenticated external assumptions.

Read the current [Version 1.1 paper](#) or the [Version 1.1 PDF](#).

Provenance

The withdrawn PDF remains recoverable from Git commit a28695f. Its SHA-256 was f5dca5a1e7bcd069441f16410664cdecac3eebe4a5af8f128dd0efa7043c8bc. This notice replaces the live public copy so historical claims cannot be mistaken for current evidence.
